Secure Your Remote Applications for the Multicloud Era
Secure Your Remote Applications for the Multicloud Era

In Summary

- **Public cloud infrastructure** offers compelling value to corporations – now annualized in excess of $50 BN with growth rates from 20% to 40%+ reported amongst providers.
- **Enterprises are recognizing the value** of security expertise of public cloud service providers (CSPs) – CSP business depends on it. Done correctly, applications such as visual Windows or Linux applications, graphics applications or legacy applications delivered from public cloud infrastructure might well be more secure than those delivered on-premises.
- **CSP lock-in is a legitimate concern** with vendors actively competing for advantage – traditional VDI tools suffer weak feature parity across cloud platforms which limits freedom of choice.

A Fresh Approach

Teradici Cloud Access Manager takes a new approach to orchestration and entitlement, offering a SaaS service that interacts with innovative access hubs in your deployment; facilitating ultra-secure PCoIP® connections between users and workstation resources anywhere.

Cloud Access Manager is included with Cloud Access subscriptions and leverages modern DevOps practices to unwind management complexity and reduce total cost of ownership (TCO). The service works in tandem with cloud-independent Connectors deployed in the enterprise to facilitate ultra-secure PCoIP connections - from PCoIP Clients anywhere.

Traditional VDI tools, on the other hand, comprise a complexity of management and connection broker components with on-premises server-centric dependencies. Scaling to the public cloud entails a tough choice between adding layers or taking on additional products; both of which increase complexity and inflate TCO.

Secure Your Remote Applications in the Multicloud Era

One Solution, Any Scenario

PCoIP technology has long been adopted as the remote solution of choice for secure desktops and turnkey workflows in government, finance, healthcare, higher education, CAD and entertainment industries. Teradici Cloud Access deployments using PCoIP technology gain significantly from the capabilities of Cloud Access Manager, whether on AWS, Google Cloud, Microsoft Azure, on-premises, or a hybrid combination.

Benefits of Using Teradici Cloud Access Manager:

- Configure machine entitlements across multiple facilities, regions or even different public clouds from a single console.
- Align OPEX with business demands by effortlessly scaling resources up or down.
- Manage cloud consumption by automatically deallocating unused processing resources.
- Improve administrative efficiency by automating provisioning Windows or Linux virtual machines.
- Enable highly secure access for offsite users without the VPN endpoint complexities.
- Isolate deployments based on access policy, disaster recovery or sandboxing objectives.

Cloud Access Manager Admin Console
Cloud Access Manager Admin Console is a browser interface supporting Teradici Cloud Access Manager. This simple console puts delivery of a highly-scalable and cost-effective Cloud Access Software deployment at your fingertips – so you can manage your entitlements, cloud consumption costs and system health from a single interface.

<table>
<thead>
<tr>
<th>FEATURE</th>
<th>DESCRIPTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Machine Entitlement</td>
<td>Provide user assignment based on Active Directory (AD) groups</td>
</tr>
<tr>
<td>Health Monitor</td>
<td>Live indication of machine status, including ON, OFF and IN PROGRESS; Quick access to latest log messages</td>
</tr>
<tr>
<td>Machine Provisioning Service</td>
<td>Customize machine templates within the Management Interface; provisioning tools and more*</td>
</tr>
<tr>
<td>Power Management</td>
<td>Turn virtual machines on or off right from the Management Interface to minimize consumption fees; Optional auto-power feature turns off inactive machines*</td>
</tr>
</tbody>
</table>

Cloud Access Connector
Cloud Access Connector is an easily installed access hub in your environment that reduces your internal management footprint. In addition to facilitating secure connections between PCoIP Clients and remote application resources, the Connector provides NAT services for external users which eliminates VPN endpoint complexity. The Connector operates with Teradici Cloud Access Manager service to enforce user authentication and authorization policies for remote application access.

Get Started Today
Teradici Cloud Access Software is available for Windows or Linux platforms. You can install the software on physical, virtualized or cloud-based remote workstations. Follow the link below to request a free trial today! [http://connect.teradici.com/cas-demo](http://connect.teradici.com/cas-demo)

Teradici Cloud Access Manager is now available for AWS, Google Cloud, Microsoft Azure, VMware ESXi, Nutanix AHV or non-virtualized workstations. To deploy the solution on-premises, you need an Ubuntu 18.04 server to host the Cloud Access Connector. To deploy the solution in a public cloud, bring your own public cloud subscription – Visit the Teradici website for a demo or to request a trial: [http://connect.teradici.com/contact-us](http://connect.teradici.com/contact-us)

Teradici Cloud Access Manager can also broker for Remote Workstation Cards.
